## ***ATF 95 LE UPGRADE***

Penrite are pleased to announce that we have upgraded ATF 95LE to a new and improved formulation.

Utilising an advanced additive system to provide excellent durability and shift feel in combination with ultra pure hydrocracked base oils, the new improved formulation is suitable for use in a wide range of transmissions such as Hyundai, Mitsubishi, Mercedes-Benz, Mazda (M-III), BMW, Toyota, Chrysler, Proton, Nissan (C/D), Holden, Opel, Kia and in applications that require GM DEXRON<sup>®</sup>-III fluids in higher ambient temperature areas such as Australia.

It is still proven for use in the 4 speed BTR transmissions and in DEXRON<sup>®</sup>-II applications.

As such it is an ideal mineral based multi-vehicle fluid.

The new formulation is a little darker than previous and commenced from all batches from batch number 070803W and higher.

For the ultimate multi-vehicle automatic transmission fluid, we recommend SIN ATF and for semi-synthetic, ATF MHP.

*Please note, the upgraded formulation should not be used in DSG/DCT gear boxes.*
