PRO ENGINE OIL UPGRADE

The Pro range of workshop oils have now been upgraded to API SM.

Please note this does not necessarily mean that they are all low zinc products as Pro 15, Pro 20 and Pro 22 are not bound by the phosphorus limit that impacts the overall zinc levels. They are still at 0.108%.

Pro 5 has been API SM/GF-4 since release and Pro 10 now joins it.

All products are made using pure hydrocracked base oils.
