DIESEL RANGE UPDATE

NEW PRODUCT AND BETTER PERFORMANCE

We have an exciting new addition to the SIN Range. To fill the need for a fully synthetic “conventional” style diesel oil, we have now released in 6L packs:

SIN DIESEL SAE 5W-40

This oil is made from fully synthetic base oils including ester and PAO, just like SIN 0, 5 and 10 petrol engine oils. Meeting API CI-4 and ACEA B4/E4 it is an ideal product for many light duty diesel engines on the market (that do not use exhaust DPFs) as well as in heavy duty trucks. So if you are looking for a fully synthetic diesel oil, SIN Diesel 5W-40 is the product of choice.

Product is now in stock.

At the same time, we have identified a need for a CI-4 rated product in our HPR Diesel range. We are pleased to announce that the existing formulation for ***HPR Diesel 5 SAE 5W-40*** has successfully passed the API CI-4 tests, so all HPR Diesel 5 currently in the field meets this specification. Labels will be upgraded at the earliest opportunity.

Note that these products are different chemistry, that is, they are not the same.

The release and upgrade of these two important products further underscores our position as technology leaders in the marketplace.
