

INTRODUCTION OF HDPS FLUID

Penrite are pleased to announce that a new product, HDPS Fluid is now available on the market.

Penrite HDPS Fluid is a premium semi-synthetic oil specially designed for use in **Honda Dual Pump System** differentials.

It contains a unique combination of anti-squawk additives and synthetic base oils, to provide maximum wear protection and anti-shudder life.

We have field trialed this product in Honda CRV rear differentials and have found that after 40,000km or more, there is still no evidence of shudder, grabbing or noise from the differential, which is superior to the performance from the initial fill product.

As such it is recommended for use in all Honda CRV and HRV differentials where the OE product Honda DPSF is recommended.

While it may also be used in manual transmissions where an automatic transmission fluid is recommended, Manual Gear Oil 70 is our prime recommendation as it is optimised for transmissions applications and uses different friction modifiers than the new HDPS Fluid.
