

## API SN+ACEA-08 VS API SM+ACEA -04

Penrite have recently upgraded many products from API SM to API SN along with an upgrade of ACEA 2004 to ACEA 2008. There are significant performance gains that go with the upgrade.

Below is a spider chart that illustrates the differences. There are large advances in wear, sludge and deposit control.

Note that according to ACEA requirements, the year of release of the specification is not supposed to be quoted on the label nor product literature. So labelling oils as A3/B3-04 or A3/B3-08 is not permitted. ACEA specifications should only be quoted if the oil meets the current specifications.

Hence any Penrite product that quotes ACEA specifications, uses technology that meets the latest issue of those specifications.
