

GREASE UPGRADES

The Penrite grease range is on the process of being upgraded, with new version of Extreme Pressure Grease and High Temperature Wheel Bearing Grease due to be appearing from our warehouses through early 2011.

Extreme Pressure Grease

Identifiable by its new red coloration

- easier to see in applications
- slightly stiffer
- different odour
- 50% increase in load carrying ability

High Temperature Wheel Bearing Grease

Identifiable by its new purple coloration

- Tacky rather than stringy so it stays on the lubricated surface
- Performs better in heavy duty applications such as truck and trailer bearings
- 150% increase in load carrying ability
- Can be used in more industrial applications
- Reduced oil separation compared to the previous blue product

In addition we have worked with package suppliers and these products as well as our other grades will be available in a new 450g cartridge that has a less of a tendency to leak from the base.
