FORD MERCON-V APPROVAL FOR PENRITE ATF SYNTETIC

We are please to announce that our ATF Synthetic is now fully approved by Ford Motor Company against the MERCON-V specification (Ford M2C 202-B).

Our approval number is M5050402 and this will be reflected in our labels and product information sheets in the very near future.

This makes Penrite one of the few companies in the world to market a fully licensed product and gives us the ability to provide fully backed warranty service for US made Ford's and early Jaguar S Type (of the current shape).

ATF Synthetic also meets GM DEXRON-IIIH specification but a formal approval is not being sought at this time.
